IDEA TITLE

SMART INDIA HACKATHON 2026

Pawlytics: ward-level conflict intelligence

Proposed solution

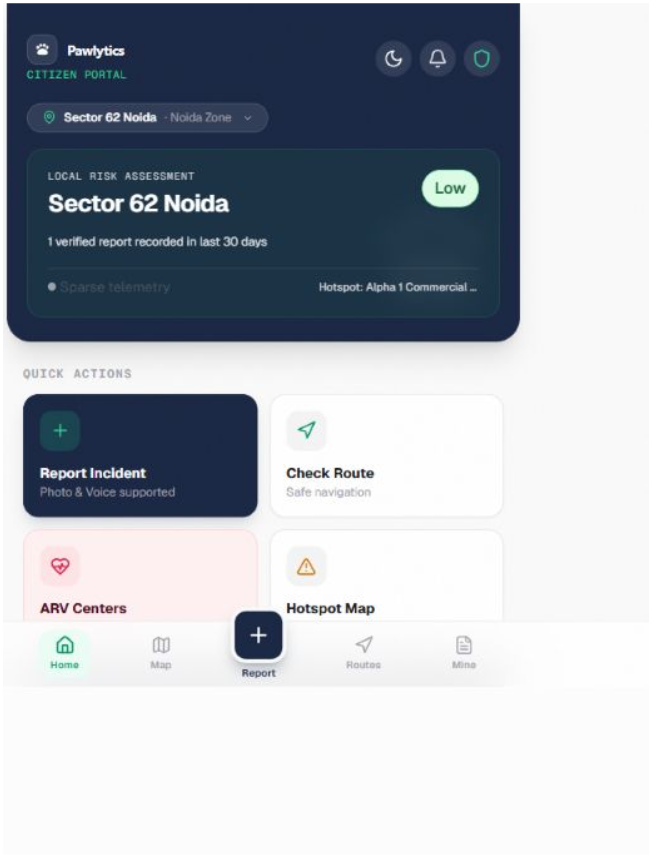

Citizen reports capture incident type, location and time. Authorities verify evidence and track field actions.

How it addresses the problem

Recent, verified reports inform local risk views and route caution. Ward dashboards support response priorities.

Innovation and uniqueness

An explainable score combines severity, age and trust. Evidence confidence stays visible. Actions close the loop.

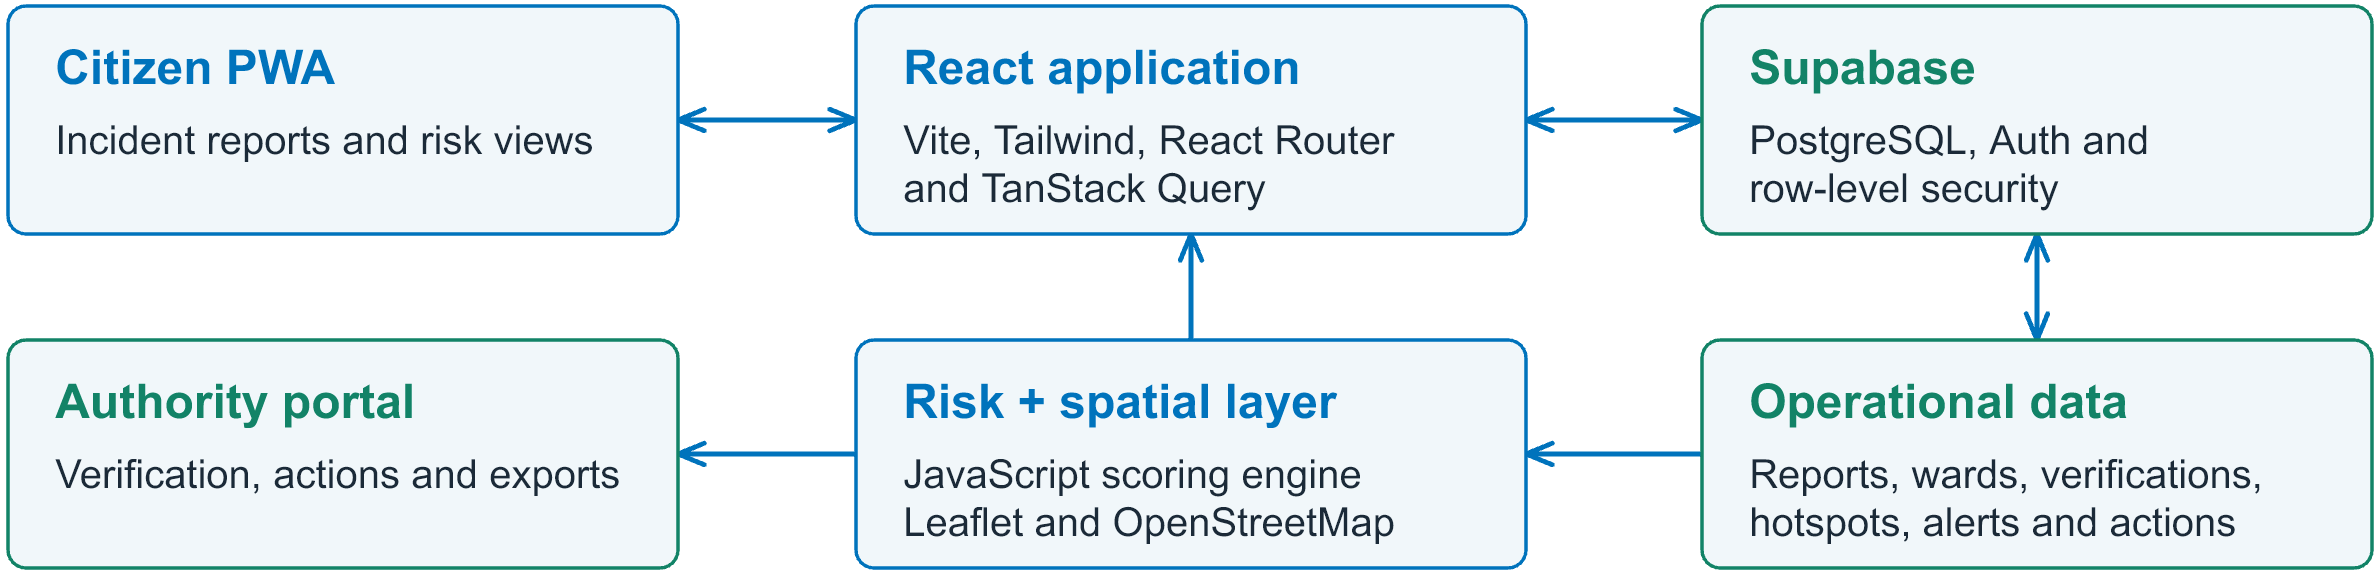

Citizen portal: synthetic demo data

Team Pawlytics

TECHNICAL APPROACH

SMART INDIA HACKATHON 2026

Technologies and system architecture

Methodology and implementation process

Recent verified evidence drives the score. Human teams decide the response.

Team Pawlytics

FEASIBILITY AND VIABILITY

SMART INDIA HACKATHON 2026

Feasibility of the idea

Existing web prototype and managed database support a focused one-ward pilot.
Proposed seed target: 150–250 ground-truth reports with a field verification partner.

Potential challenges and risks	Strategies to overcome them
Sparse or uneven reporting	Seed one ward and show evidence confidence.
False, duplicate or low-quality reports	Human review, trust weighting and audit history.
Privacy and limited field capacity	Role-based access, RLS and a named response team.

One ward
Validate data and response

→

3–6 months

IMPACT AND BENEFITS

SMART INDIA HACKATHON 2026

Potential impact on the target audience

Social: citizens

Local risk awareness and a clear reporting channel.

Economic: municipal teams

Prioritized review and fewer disconnected work records.

Welfare and environment

Evidence for ABC campaigns and waste-site follow-up.

Pilot measures: verification turnaround, action closure time and report location quality.

Screenshot uses synthetic demo data. Benefits are expected outcomes to test in the pilot.

Research and references

1. PIB / NCDC: dog-bite and suspected rabies reports, 2024

37,17,336 reported dog-bite cases and 54 reported suspected human rabies deaths.
PIB, 22 July 2025. Reported figures do not estimate the full burden.

2. State-wise geospatial analysis of dog bite burden in India, 2018–2023

Janekunte et al., 2025. QGIS study supports a spatial analysis approach.
It does not validate Pawlytics or its ward-level risk score.

3. Implementation reference: README and explainable risk engine

Live UI captures: 6 September 2026. Technical details and source code are available through GitHub.
